PRESS RELEASE 11-5

Trading Symbol: LWC

Date: March 29, 2011

---

### **Leeward Commissions Ni 43-101 Resource Report from Wardrop**

Leeward has commissioned Wardrop, a Tetra Tech company, to prepare a National Instrument 43-101 resource study on its Nithi Mountain Molybdenum Deposit. Wardrop has previously completed a NI 43-101 reserve study on the adjacent Endako Mines which is owned and operated by Thompson Creek Metals. Wardrop is quite familiar with the characteristics of large tonnage open pit porphyry molybdenum deposits in the province of British Columbia. With over 200 drillholes completed to date and additional drilling planned to commence shortly. Leeward has an extensive data base that is necessary to complete such an engineering study which will enhance the future economic studies to be completed and required to potentially do a prefeasibility study in the future.

The objective of this study is to further defining of the potentially large tonnage at various grades for the Nithi Mountain Molybdenite Deposit. The flat lying nature of this molybdenum deposit, which is well exposed at the surface, makes it ideal for the use of a low cost open pit mining methods which the neighboring Endako Mine has enjoyed over the past several decades of production.

The Nithi Deposit located 10 km south of the Village of Fraser Lake, BC. It is situated in central BC adjacent to a major highway (Hwy 16), CN rail and power lines and only 18 km from the active existing Endako Molybdenum Mine. Nithi represents a significant in the ground asset of molybdenum in a politically-secure area of the world that lies immediately adjacent to existing infrastructure.

On behalf of the Board of Directors

“Michael Marchand”  
President
